UNIFORMS • SOLUTIONS

**Redfyn uniforms
are manufactured at company's
in - house manufacturing activities
starting right from yarn to finished
products using the state of the art
technology and software to deliver
only the best quality products.
A vertically and laterally integrated
manufacturing set - up with
in-house R&D laboratry
setup with in-house focus on
high quality and delivery.**

COMPANY PROFILE

PROPERTIES

- **Breathability**

Wicking fabric let air in and sweat out.

- **Quick Dry**

Wicking R-knit has a special cross section and a large surface area, which picks up moisture and carries it away from the body, spreading it out, to evaporate easily on the outside of the fabric. So you stay cool and dry.

- **Colour Fastness**

R-knit fabrics will not fade easily as compared to cotton fabric.

- **Light weight**

They are lightweight because R-knit never becomes heavy as it absorbs more and holds less liquid.

Moisture Management Technology

Wicking fabrics are modern technical fabrics which draw moisture away from the body. Moisture wicking relies on "capillary action" which is the movement of liquid sweat through tiny spaces within the fabric due to the molecular forces between the liquid structure of yarns and by applying a variety of treatments to surfaces within the structure. R-knit fabrics holds very less water as compared to cotton.

Redfyn offers a superior range of school uniforms that promotes moisture transfer away from the body. They are light-weight because R-knit never becomes heavy as it absorbs more and holds less liquid.
