## Why we ?

Max Logistics System is head and shoulders above many competitors in terms of our ability to understand issue and work outside of conventional constraints. Our operations/Managements team will always work to overcome technical and commercial challenges than rely on less satisfactory compromises.

We take a proactive approach to each shipment/project which means not merely carrying out a client’s wishes ,but going the extra mile to improve on what has been value , often giving our client savings in the long run.

In an industry not necessarily renowned for its customer services, we are also very proud of the high emphasis we place on being truly customer focused. We will not leave a job untiled every exiting or potential issue has been resolved, and if unexpected problems arise, even if not directly related to our work, we will address them.

## Calculate The Volumetric Weight Of Your Shiment

Sometimes, large items with a light overall weight can be charged according to the space they take up on aircraft. In these cases, volumetric weight or dimensional (Dim) weight, is used to calculate the shipment cost. It is recommended that you calculate the volumetric weight for every shipment that you send, then compare this to its actual weight. The greater weight of the two is used to work out the price that we charge you.

International volumetric weights are calculated using the formula below :

**(Length x Width x Height in centimeters) / 6000 = volumetric weight in kigograms**

\*\* some air lines use 5000 instead of 6000

## Calculate The CBM

Calculate the cube meter (or cubic foot), volume and quantity per shipping container.

Want to get a quick and easy calculation of how many of your product(s) will fit in a shipping container ?

Log on to our site [www.maxlogisys.com](http://www.maxlogisys.com) to use CBM calculator
